Life Crystal Drink The Fountain of Youth

Brief presentation on Life Crystals

Discovered and Developed by Dr George Merkl, Ph.D

Life Crystals, discovered by the late Dr. George Merkl, who successfully demonstrated cold fusion 1967 for the U.S. Department of energy. This process actually enabled Dr. Merkl to discover the free energy molecule ATP adenosine triphosphate. ATP is present in all living things, the ability to extract it from substances which have a higher percentage of the ATP molecule, was one of Dr. Merkl's major discoveries.

The Life Crystals are extracted from off the shelf food items, like herbal teas, organically produced high purity fruit juices, fructose and dextrose, converted to the five carbon sugars with ATP and GTP where regular cane sugar is a six carbon sugar which lowers immunity.

Life Crystals are produced in a duplication of photosynthesis, the solar energy synthesized adenosine and guanosine phosphates (ATP & GTP) from fruit and vegetable juices. This permits us to provide ATP directly from plants for cells, thus bypassing the Krebs cycle. The ATP brings our mitochondria into superlattice resulting in superconductivity which occurs when electrons are arranged in Superlattice order.

All life is dependent upon energy production in the form of ATP and GTP molecules mainly through glycolysis in conjunction with the citric acid cycle. These energy yielding reactions are dependent upon normal enzymatic activity. Therefore, all life is dependent upon healthy DNA and RNA found in the nuclei of our cells.

By providing readily available ATP and GTP, it is possible to ensure optimal energy levels necessary for cellular and genetic growth, repair and function. In Life Crystals, the energy transducer is located within the ATP and GTP. The drink then represents a highly stable concentrated energy reservoir of ATP molecules along with nourishment for the genes in the form of the five carbon sugars, providing the four basic building blocks of life in a pure form.

ATP and GTP act as a stimulator for the proliferation of all cells; brain tissue or organ cells. ATP and GTP will increase mental capacity by growing new brain cells and tissue replacing damaged and destroyed brain cells.

As cells age, oxidative damage to mitochondrial membranes and “death gene” aging RNA degenerations in the DNA and RNA results in the production of metzymes. Metzymes are faulty enzymes that reduce or interfere with normal energy and maintenance physiology within the cells. Infection and degeneration, even death can occur. This is the normal sequence of events leading to old age and death. However, if one could repair and normalize DNA and RNA function qualitatively, then it would be theoretically possible to postpone or even to some degree reverse the aging process by preserving cellular respiratory function. Based on the “LAW OF SIMILARS” “Similia Similibus Currentor” it may now be possible to nourish DNA and RNA structures by providing the building blocks of these structures back in the body.

The Life Crystal drink containing the monocrystals now holds the promise of nourishing the DNA and RNA in our cells. Nourish the body; it will survive for a time. If you nourish the genes, it may survive 100, 150, or 200 years.

Life Crystals are to be thought of as the Life giving energy nutrients. In the genetic milieu, we find all the material necessary for genetic replication, growth, and development. This solution in essence, contains the building blocks of life itself: The high energy molecules ATP and GTP, the five carbon sugars, ribose and deoxyribose, the food for the blueprints of life. . The penta carbon sugars of the DNA (deoxyribose nucleic acid) and RNA (ribonucleic acid).

With properly functioning enzymes, the body takes defensive measures against toxins and repairs former damage. A disorder of any kind can be rectified by restoring enzymes under suppression. Properly functioning enzymes not only brings recovery but a measure of rejuvenation as well.

Life Crystals

- Detoxifies your body
- Restores cellular respiration
- Restores circulation
- Removes plaque
- Normalizes cholesterol and removes from veins
- Reduces blood pressure
- Reduces angina attacks
- Long term prevents heart disease
- Long term use prevents kidney disease
- Increases energy level
- Increases sperm production

- Increases stamina
 - Reduces allergies
 - Reverses stroke damage
 - Strengthens immune system (cells)
 - Regulates your tissues
- Myocardial Necrosis (damage from heart attacks)
Nerve cell damage, organ necrosis (liver damage)

The preceding description of Life Crystals comes directly from a lecture given by Dr George Merkl. George referred to the Life Crystal drink as the crude form of the Life Crystals as opposed to the refined Life Crystal injectable. The difference being in assimilation as the injectable was more immediate and Dr Merkl said that you could get the same results with the drink, however the drink would take more time as the molecules were larger affecting absorption. Instructions were to hold in your mouth for better absorption.

The combining of Life Crystals with organic Fulvic acid increased the assimilation of the Life Crystals into the cells as fulvic acid being nano in size carries the Life Crystals directly into the cell. A synergistic, harmonious combination of elements as both the Life Crystals and fulvic acid remove toxins from the body and provide energy to the cell. Fulvic acid being molecular oxygen triggers the mitochondria to produce more ATP energy.

The combination resulted in the creation of our Elixirs; Divine Vine, ATP Plus and Pineal formulas, each a combination of Life Crystals and organic fulvic acid plus proprietary bio-energetic frequencies added to achieve certain desired results.

Divine Vine: specifically formulated to remove halogens from the thyroid and pineal glands.

Pineal: specifically formulated to remove toxins from the pineal gland and to also oxygenate, the pineal and pituitary glands assisting in brain repair.

ATP Plus: specifically formulated for extreme energy. Excellent for competitive athletes or for energy to counter Chronic Fatigue

Testimonies from our clients using our elixirs include: good feelings, brain repair, retinal repair, nerve repair, elimination of pain, increased energy, increased libido, Alzheimer's symptoms decreased, cognition increased, corrected genetic scoliosis, Parkinson's disease relieved and strengthened the immune system (increased stem cell production).

Published Medical research:

The dual role of ATP as the signaler;

- Adenosine triphosphate (**ATP**) as fuel. That universal energy currency drives the biological reactions that allow cells to function and life to flourish----making ATP a crucial player in the biological world.
- **Calcium**, when bound by ATP, receptors literally open to form a channel that allows sodium and large amounts of calcium ions to rush into cells. ATP binding to their extracellular surface sets off a cascade of molecular interactions inside cells that results in intracellular calcium stores being released. In both cases, the calcium can then set off further molecular events that alter cell behavior and may cause the cell to release other transmitters acting in concert with other neurotransmitters as a co-transmitter.
- **ATP** acting in the brain stem network is responsible for basic body functions such as **breathing, heart rhythm and gastrointestinal action**

- **ATP** plays an important part in the **functioning of the five senses**.
- **In the Eye**, for example, ATP receptors on nerve cells in the retina influence the cells responses to information received from rods and cones, the eyes light detectors. The retinal nerves, in turn, dispatch ATP and acetylcholine as co-transmitters to convey their information to sensory-processing centers in the brain.
- **ATP** released during an embryo's development signals the eye development.
- **Hearing** release of ATP during development is also essential for the proper formation of the cochlea, the organ responsible for hearing. ATP signaling continues to be crucial to the workings of the inner ear in adults. Some 50,000 hair cells---the sound transducing neurons of the inner ear—line the human cochlea and about half of those display receptors for ATP, which has been shown to ease neural firing in some circumstances
- **Taste buds** sensory nerve endings in the tongue, possess ATP receptors that mediate taste.
- **Digestion**, ATP is vital as a transmitter from taste bud cells to gustatory nerves. Meanwhile ATP binds to receptors on cells lining the inner surface of the gut wall triggering secretion of digestive enzymes.
- **Pain**. Another form of pain, one associated with damage to nerves, is called neuropathic pain and involves ATP by a different route a key step in the development of this type of pain involves activation of ATP receptors on spinal cord immune cells called **microglia**. The microglia, in turn, release molecules that irritate nerve fibers, leading to chronic pain. Sensory nerve Nerves Cerebral cortex Dorsal root ganglion Dorsal horn Axion Spinal pain neurons Sensory neuron cell body Axon (nerve fiber) spinal cord Vertebra Neurons are surrounded by **astrocytes** and **microglia**,

helper cells that provide nourishment and protection. Collectively known as **glia**, these support cells also monitor and regulate neural activity by contributing sensitizing or dampening as needed to sustain neural signaling.

- **Heart** and blood vessel disorders, Cells that are distressed or physically damaged can release or spill ATP into the extracellular space. In those situations, ATP signaling often results in protective and healing responses, including by blood platelets, the cells responsible for forming a clot to stop bleeding from a new wound. Platelets display the ATP receptor subtype, and its activation by extracellular ATP causes them to undergo changes that lead to clot formation.
- **ATP regulates Blood Pressure**, red blood cells (RBC's) help regulate pressure by releasing ATP as vasodilatory signaling molecule. ATP released from RBC's helps regulate vascular tone by binding with purigenic receptors on endothelial cells, which then respond by releasing nitric oxide, a potent vasodilator, into the surrounding smooth muscle cells.
- A variety of **diseases are linked to impaired ATP release from RBC's**, including **cystic fibroses, pulmonary hypertension, and diabetes**.
- Cancer, **ATP** can inhibit the growth of tumors, including prostate, breast, colorectal, ovarian, and esophageal cancers, as well as melanoma cells. ATP signaling acts in part to promote suicide of the tumor cells and in part to promote cell differentiation, which slows tumor cell proliferation.

Free Energy Scrolls - The Seed of Light

A three dimensional vortex, performing three dimensional motion, inverts through its poles back and forth and changes signs constantly.

The scrolls form strands with matching frequency of oscillation and equal wavelengths. These strands of scroll braid into photon vortexes. The vortex of an electron is fed by 918 pairs of photons.

A $917 \frac{1}{2}$ pair electron vortex copies the genetic trait to form the proton, and 918 electrons form the neutron
